

Instead of spending thousands of euros or dollars on low flutes, turn your flute into a bass flute, your bass flute into a contrabass flute or even 2 octaves lower!

This is now possible with the Tomasi MicroKork! You install it in (your) flute and all you need is an active speaker, a radio and an effects pedal.
You can get by with just over € 1000 in total!

The Tomasi MicroCork is a universal pickup and allows freedom of movement on the podium. No conversion is necessary, as the MicroCork is just as suitable for acoustic playing as a conventional cork system. So you can play one piece as a flute and the next as a bass flute, etc.

You can assemble it yourself with the enclosed instructions; it works for all flutes and headjoints.

The crown and cork plate are also available in silver or gold to match your flute.

The unrestricted freedom of movement is ideal for live performances!

The Tomasi MicroCork is a pickup (not a microphone) that is installed in the headjoint instead of the headjoint cork and crown. It replaces the cork and crown and can remain permanently in the headpiece even when not in use. There is no feedback and no amplification of background noise.
